

# Jet Stream Video Management

Jet Stream video management servers provide a leading edge design that can scale to fit your video surveillance needs. Jet Stream servers are an ideal choice for corporate offices, manufacturing facilities, retail shops, banking institutions and educational centers. Every server from Jet Stream is purpose built to ensure the greatest performance for your video surveillance needs.

The Jet Stream video management server is designed to operate with virtually every type and manufacturer of security cameras including legacy analog systems as well as leading edge IP megapixel cameras.

In addition to maximum compatibility with the leading camera manufactures they are also designed to work seamlessly as video controllers for the entire Jet Stream storage family. Therefore allowing for a very scalable system that harnesses today's leading technology in the surveillance market.

## Ksenos VMS

### Revolutionary tool for HD Video Security

Powerful and easy to use video management system, which is suitable for securing environments of all sizes. Ksenos offers an easy-to-learn, fast interface.

The user interface is based on an innovative timeline from where the recordings and live image can be managed at the same time. Thanks to the timeline and the clear overview, important events can be compiled and delivered quickly.

- IP and analog support
- Wide camera support ONVIF
- Advanced motion detection
- Area motion search
- Event rule engine
- Audio recording
- Camera cloning
- Fisheye support
- Video wall
- Mobile client
